Gas pipeline upgrades underway in Greencastle

Greencastle, Ind. — Contract crews working for Vectren Energy Delivery (Vectren) have begun replacing gas mains and service lines in Greencastle as part of the company's pipeline replacement program, which is a multi-year program to replace about 1,200 miles of bare steel and cast iron pipeline infrastructure throughout Indiana. In Greencastle, more than \$900,000 will go toward retiring nearly two miles of gas main and 100 service lines in 2016. Since 2008, more than one mile has been retired within the city. Vectren will retire a total of nearly three miles in Greencastle by the end of this year.

"To ensure the continued reliability of our natural gas pipeline systems and service, Vectren has undertaken a program to replace essentially all of our bare steel and cast iron pipeline infrastructure in addition to other improvements to our natural gas delivery system," said Mike Roeder, Vectren Energy Delivery of Indiana-North president. "These infrastructure enhancements are vital to meeting federal requirements and ensuring the continued safety of our system for decades to come."

Streets affected during the first project include: Martinsville Street, West Street, East Street, Zinc Mill Road, Center Street, Fairview Street and S. Central Street. Visit the Active Projects tab on www.vectren.com/pipelineremplacement to view an interactive map displaying all streets in Greencastle where construction will take place in 2016.

In most cases, a polyethylene (plastic) system is being installed to replace the current bare steel and cast iron gas pipeline system. First, the gas main, which is a gas pipeline that ranges in size from 2" to 8" and is often underneath the street or sidewalk, will be replaced within the right-of-way, and then the service lines running directly to homes and businesses will be replaced. Upon completion of the project, affected yards, sidewalks and streets will be restored.

"Construction for these pipeline projects may take several weeks to complete, and times may vary based on the size of the project, weather, ground surface/soil and other situations that may arise," said Roeder. "Please be assured that Vectren and its contractors will make every effort to complete each project as quickly as possible and minimize impact to customers and the community."

Prior to service replacement, a Vectren representative will contact customers to provide an overview of the required work. Vectren reminds Greencastle residents to please keep the following in mind:

- Please **exercise caution when driving through the construction zones**.
- We urge residents and their children to **keep a safe distance away from any work zones**.

Greencastle is one of nearly 75 cities in Indiana undergoing this type of pipeline replacement. Since 2008, nearly 340 miles of gas mains have been replaced in the Vectren North territory, which has led to a reduction in leak calls and natural gas emissions from the distribution system.
